

It's easy to get screened for colon cancer

Get your FIT* kit at your health centre

*Fecal Immunochemical Test

A FIT is a free, at-home test that can help find colon cancer early.

If colon cancer is found early and treated there is a 90% chance it can be cured. Getting checked for cancer regularly leads to healthier lives for you, your family, and your community.

If you are ages 50 to 74, talk to your healthcare provider about whether getting checked for colon cancer is right for you.
